

# ALUMINIUM STOCKHOLDERS ASSOCIATION

## ENVIRONMENTAL POLICY

### POLICY STATEMENT

It is the policy of ASA, via its constituent member companies, to recognise and measure the potential environmental impact of our business. Further to this, member companies undertake to organise and manage their activities to control and reduce such environmental impact whilst continuing to meet the commercial requirements of their customers.

The above policy covers, but is not limited to, the following aspects of stockholding and distribution:

- Legislative and code of practice compliance
- Vehicles Policy, both for site and road vehicles selection, operation and maintenance
- Environmentally responsible materials purchasing and sourcing policies
- Waste and damage minimisation by efficient stock control, handling and cutting services
- Active recycling strategies for both metal and packaging materials
- Close co-operation with customers, suppliers, contractors, regulators, other professional bodies and the community at large to play an active role in their environmental requirements
- Office and warehouse buildings management
- Promotion of Aluminium as a sustainable, competitive material by virtue of its functionality, recyclability and lightweighting potential in vehicle applications, as well as its natural abundance in its mineral form
- Provide suitable training to enable employees to deal with their specific area of environmental control
- Establish targets to measure the continuous improvements in our environmental performance
